FEATURES

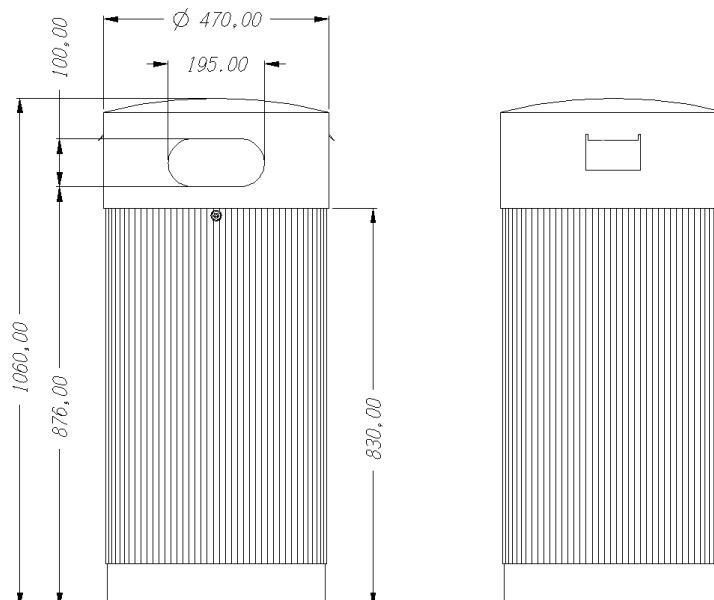

Manufactured from 2mm thick steel plate, specifically designed with a ribbed finish to prevent fly-posting.

The lid, containing the glove/bag dispenser, attaches to the rear of the body with a reinforced hinge and to the front by a standard triangular lock which can be opened to facilitate emptying and maintenance tasks.

The body is the central part of the container; housing a 55 litre capacity waste disposal bag. The gloves/bags are black to disguise the contents. They are recyclable, opaque and waterproof and their ergonomic design and size makes them easy to use.

The base forms the integral lower part of the container. It has a flat 470mm dia x 4 mm plate, fixed to the ground with four drill holes and adjustable threaded anchor bolts.
